### Wheel and Performance Tuning

With its distinct shapes. The Alpha III wheel combines striking aesthetics with functional properties which makes this sporty wheel extraordinarily unique.

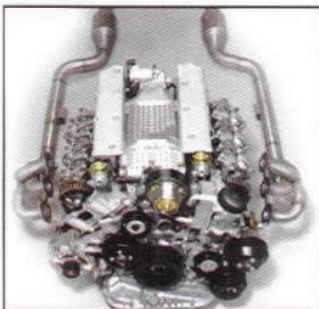

### Transmission

Mechanical MKB self-locking differentials provide more traction, different axle transmission ratios for more top speed, more acceleration or more relaxation – just as you wish.

### Performance Tuning Kits

MKB Compressor tuning kits provide high boost pressure, optimized air intake paths, special camshafts, and an exhaust system designed to minimize pressure loss.

1. MKB stainless steel exhaust manifold. Highly efficient exhaust guiding and a larger cross-section.
2. MKB compressor drive. Boost 1,3 bar (Series 1,1 bar)
3. MKB high performance camshafts. Longer opening time and greater valve lift including MKB valve springs.
4. MKB high performance air filter inserts. Low air intake resistance.
5. Electronic control unit. Programming adapted for injection quality and firing time.
6. MKB high performance metallic catalytic converters. Four MKB catalytic converters including Y-pipes with increased diameter.
